## FM809／810

## 3－Pin $\mu$ C Supervisor Circuits

## General Description

The FM809／810 are supervisor circuits that monitor power supply or other system voltages and issue reset pulse whenever the voltage being monitored is out of tolerance．Once asserted， the reset pulse is guaranteed to be valid for a minimum of 140 ms （ 256 ms typical）．FM809xx offers active low push－pull type of reset while FM810xx offers active high push－pull type． Several threshold voltages are offered to accommodate 5．0V， $3.3 \mathrm{~V}, 3.0 \mathrm{~V}$ and 2.7 V system voltages．

The low supply current（typically $2 \mu$ A）recommends FM809／810 devices for portable designs or wherever power saving is primary．

These devices are offered in space saving 3－pin SOT23 and SC70 packages．

## Features

■ $\mathrm{V}_{\mathrm{TH}}$ voltages of $4.63 \mathrm{~V}, 4.38 \mathrm{~V}, 4.00 \mathrm{~V}, 3.08 \mathrm{~V}, 2.93 \mathrm{~V}$ and 2.63 V
－RESET（FM809）or RESET（FM810）output

October 2002

■ 140 ms power－on RESET delay（minimum）
■ RESET operation guaranteed to 1.0 V
－Supply current only $2 \mu \mathrm{~A}$
■ No external components
－Operating Range
$--40^{\circ} \mathrm{C}$ to $+105^{\circ} \mathrm{C}$（SOT23）
$--40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$（SC70）
■ SOT23－3 and SC70－3 packages

## Applications

－Microcontrollers and Microprocessors
－Appliances
－Power－Supply Monitoring
－Portable Equipment
■ Automotive Systems

Note 1: Testing in production is $25^{\circ} \mathrm{C}$ only. $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}$ for $\mathrm{FM} 8 \mathrm{xxL} / \mathrm{M} / \mathrm{J}, \mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}$ for $\mathrm{FM} 8 \mathrm{xxT} / \mathrm{S}$ and $\mathrm{V}_{\mathrm{CC}}=3 \mathrm{~V}$ for FM 8 xxR . Limits over temperature are guaranteed by design.
Note 2: RESET output is for FM809. RESET output is for FM810.
Note 3: Typical values are at $25^{\circ} \mathrm{C}$.
Note 4: Recommended minimum slew rate for the $\mathrm{V}_{\mathrm{CC}}$ rampup is $200 \mathrm{mV} / \mathrm{sec}$ in the 0 to 2 V range for the device to function properly.

## Pin Descriptions

| Pin Number | Name | Function |
| :---: | :---: | :--- |
| 1 | GND | GROUND |
| 2 | $\overline{\text { RESET }}^{\star}$ | RESET (RESET) remains LOW (HIGH) while $V_{C C}$ is below $\mathrm{V}_{\mathrm{TH}}$, <br> and for at least 140 ms after $\mathrm{V}_{\mathrm{CC}}$ rises above $\mathrm{V}_{\mathrm{TH}}$. |
| 3 | $\mathrm{~V}_{\mathrm{CC}}$ |  |

* with overbar, FM809 (RESET); without, FM810 (RESET).

## Circuit Timing (e.g.: FM809)

When operating properly with 5 V in (for example), $\mathrm{V}_{\text {OUT }}$ will also be about 5 V . When $\mathrm{V}_{\text {IN }}$ starts to fall, $\mathrm{V}_{\text {OUT }}$ will follow it down as shown. When $\mathrm{V}_{\text {IN }}$ drops below $\mathrm{V}_{\mathrm{TH}}$, $\mathrm{V}_{\text {OUT }}$ drops to ground ("issues a RESET") and stays there unless $\mathrm{V}_{\mathrm{IN}}$ also falls below its minimum operating voltage, approx. 1V. At this point, the supervisor loses control, and its output may rise, only to again follow $\mathrm{V}_{\mathrm{IN}}$ down to the ground.

When $\mathrm{V}_{\text {IN }}$ begins to rise, $\mathrm{V}_{\text {OUt }}$ follows it until 1.0 V or so is reached, whereupon the device regains control, $\mathrm{V}_{\text {OUT }}$ is pulled to ground, etc. When $\mathrm{V}_{\text {IN }}$ rises above $\mathrm{V}_{\mathrm{TH}}, \mathrm{V}_{\text {OUT }}$ comes out of RESET 140 ms later.

If it is required that a lower value than GND +1.0 V is needed on RESET signal during $\mathrm{V}_{\mathrm{CC}} \leq 1 \mathrm{~V}$, a 100 K resistor may be used on the device output (to GND for the FM809, to $\mathrm{V}_{\mathrm{CC}}$ for the FM810).

## Life Support Policy

Fairchild's products are not authorized for use as critical components in life support devices or systems without the express written approval of the President of Fairchild Semiconductor Corporation. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
