Case Type	E Series	<ul style="list-style-type: none"><li>• Case Type</li><li>• High Energy</li></ul>	

1. The performance of varistors may deteriorate, the inside elements may be damaged, and they cause the varistors to smoke or catch fire, if the following precautions are not observed.

- (1) Do not use varistors in places whose temperature exceeds their rated operating temperature due to direct sunlight or heating objects.
- (2) Do not use varistors in a humid place directly exposed to the weather or steam.
- (3) Do not use varistors in places filled with dust, salt-mist or corrosive gas.
- (4) Apply soldering conditions within the limits prescribed in the catalog or product specifications.  
For surface mount varistors, use flux with a halogen content of less than 0.2 wt.%. Do not use strong acid flux.
- (5) Do not use solvents such as thinner and acetone which dissolve or make the exterior covering of varistors deteriorate.  
Ultrasonic cleaning shall be so set that the vibration can not travel the assembly boards.
- (6) Do not expose varistors to intense vibration, shock (drop shock etc.) or pressure making the exterior covering or inside element crack.
- (7) Do not apply high voltage exceeding the rated maximum applying voltage to varistors. In the case of automotive jump starts, however, use the varistors within short-term allowable voltage limits prescribed in the catalog.  
If voltage wave form is not complete DC, a maximum value of peak voltages shall not exceed the rated maximum applying voltage.
- (8) Do not apply peak currents exceeding the rated maximum energy.
- (9) When peak currents are repeatedly applied to varistors, do not exceed the pulse life time ratings prescribed in the catalog.
- (10) When peak currents are intermittently applied to varistors at short intervals, do not exceed the rated wattage.
- (11) Using varistors in circuits whose frequency exceeds 1kHz may damage their elements by heat generation due to dielectric loss.
- (12) In the case of coating or molding varistors with resin, do not use the resin which makes the varistors deteriorate.
- (13) Do not install varistors in places near by flammable substances.

2. Varistors may blow up, if the following precautions are not observed.

- (1) Do not use varistors in circuits applied peak currents exceeding the specified limits.
- (2) Do not exceed the rated maximum applying voltage.

3. Varistors do not function but damages devices, if the following precautions are not observed.

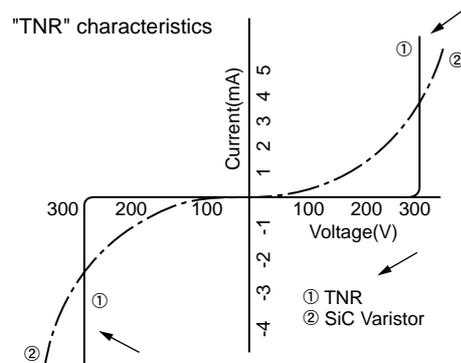

- (1) Hold the root of the varistor lead when bending or cutting the lead.
- (2) The lead close to insulation cover shall not be bent or applied to outer force.
- (3) When soldering the lead, do not damage a solder material and insulator fabricating the varistor.

- (4) Put the proper volume of solder (the height of fillet) on pc boards for installing surface mount varistors, because it directly affects the installed varistors. The design of copper pad patterns and dimensions should be set so that the proper volume of solder can be provided.
  - (5) When mounting surface mount varistors on the pc board, the improper soldering temperature and time out of the limits may reduce the adhesive strength of their terminals.
  - (6) When cutting off a multi-board to make individual units, curving or twisting the board may make the varistors crack. Appropriate tools should be used to cut it off.
4. The following preventive measures should be made for avoiding unexpected accident.
- (1) When using a varistor in between circuits, connect an earth leakage breaker (ground-fault circuit interrupter) or current fuse in series with the varistor.
  - (2) When using a varistor in between a circuit and ground, connect an earth leakage breaker (ground-fault circuit interrupter) or both of a current fuse and thermal fuse in series with the varistor. Also, in case of excessive voltage due to ground short circuit accident, use the varistor with the rated voltage higher than the excessive voltage.
5. Store varistors at a temperature of  $-10$  to  $+40^{\circ}\text{C}$  and a relative humidity of less than 75%. Avoid storing in environment of rapid changes in temperature, direct sunlight, corrosive gas or dust, and store with the varistors packaged.
6. Follow safety standards such as Electrical, UL, CSA and so forth, which specify the use of varistors.
7. Catalogs  
Specifications in catalogs may be subject to change without notice.  
Performance test data in the catalogs show typical values, which are not assured in the catalogs.

TNR is a "NEW" metal oxide varistor having steep non-linear V-I characteristics and high discharge current capability, as follows:

**● TNR Features**

1. Excellent transient voltage suppression
2. High discharge current capability
3. Wide range of voltage ratings
4. Symmetrical V-I characteristics (Non Polarity)
5. Fast response
6. Steady operation for repeating surge
7. Low temperature coefficient
8. High reliability
9. UL recognized
10. CSA recognized

**● Applications**

1. Electronics instrument protection
2. Telephone system protection
3. Relay contact point protection
4. Rectification diode protection
5. SCR protection
6. Reduction of abnormal voltage in high voltage current
7. Switching transistor protection
8. Reduction of switching surge in electromagnetic brake
9. Prevention of error in digital circuit

Technical Term	Description
Varistor Voltage	Voltage across the varistor measured at CmA DC. C = 0.1 or 1.0 as specified.
Applied Voltage (ACrms)	Maximum continuous sinusoidal RMS voltage which may be applied.
Applied Voltage (DC)	Maximum continuous DC voltage which may be applied.
Maximum Clamping Voltage	Peak voltage across the varistor, measured under conditions of a specified peak impulse current and specified waveform (8/20 $\mu$ Sec.) applied 1 time.
Rated Wattage	Maximum power that can be applied within the specified ambient temperature.
Maximum Peak Current	Maximum current within the $\pm 10\%$ varistor voltage change with standard impulse current (8/20 $\mu$ Sec.) applied 1time.
Current Wave Form for Clamping Voltage Test and Maximum Peak Current	
Energy	Maximum energy within the $\pm 10\%$ varistor voltage change when 1 impulse $\tau$ msec long is applied. $\tau = 2$ or 20 or 200 ms as specified.
Capacitance	Typical value measured at a 1kHz test frequency. (Sinusoidal wave. Reference purpose only)

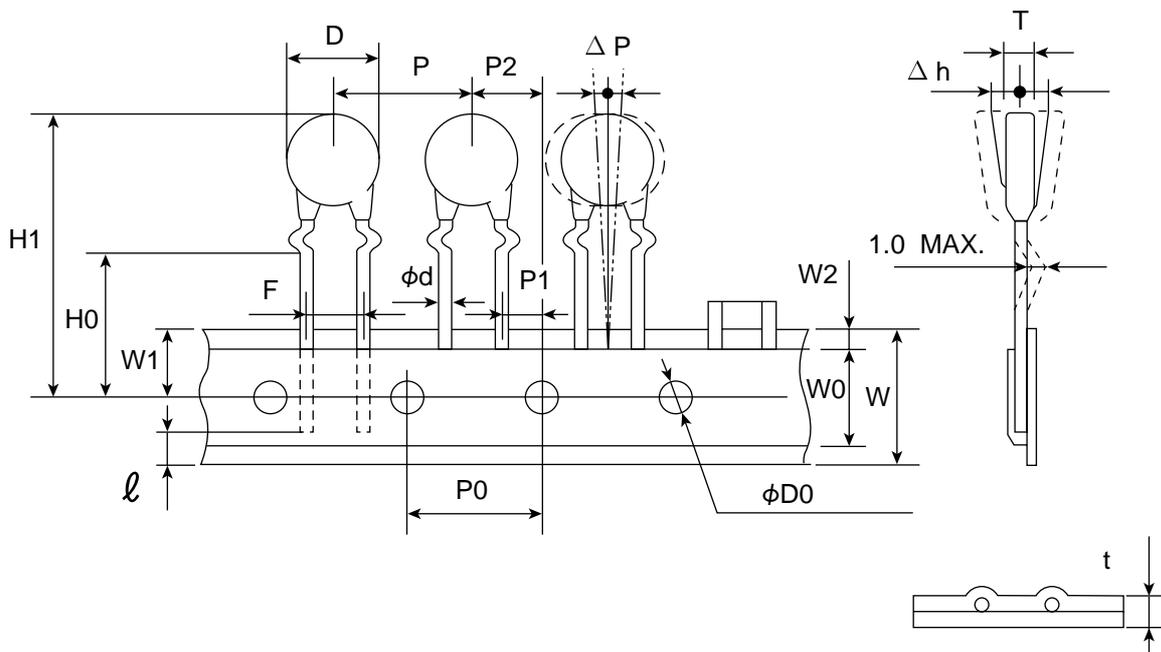

- ◆ This Specifies taping specifications for TNR varistors which have normal disk diameter of 5~15mm and nominal varistor voltage of 15~470V.
- ◆ These taping specifications conform to JIS C 0805.

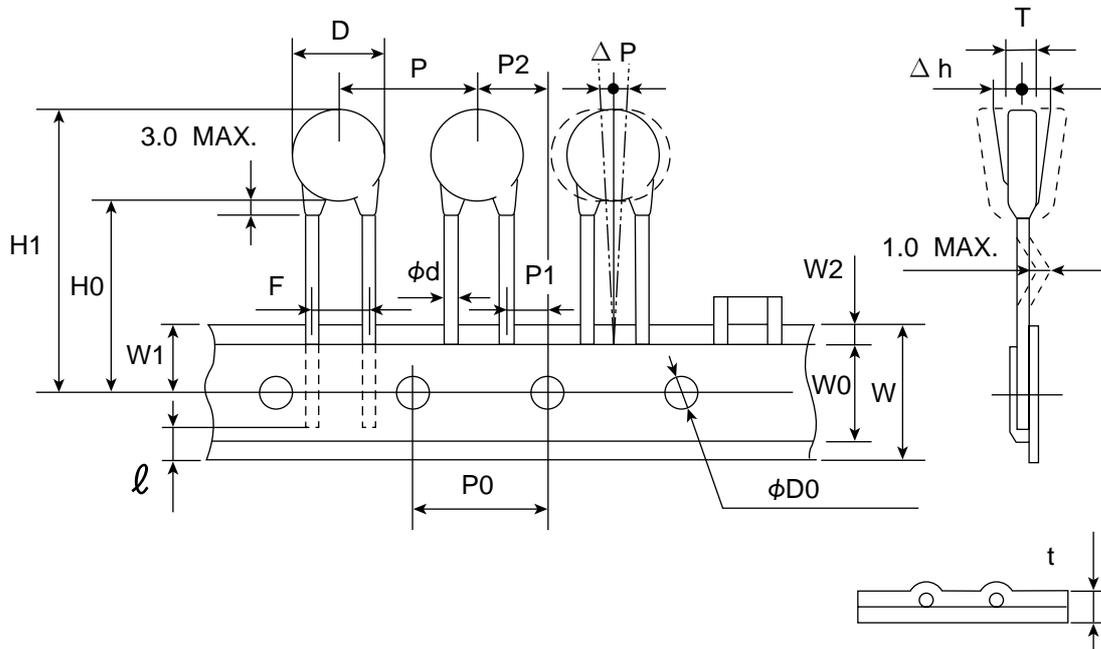

● Part Numbering System

(Taping code is to be added at the end of model number.)

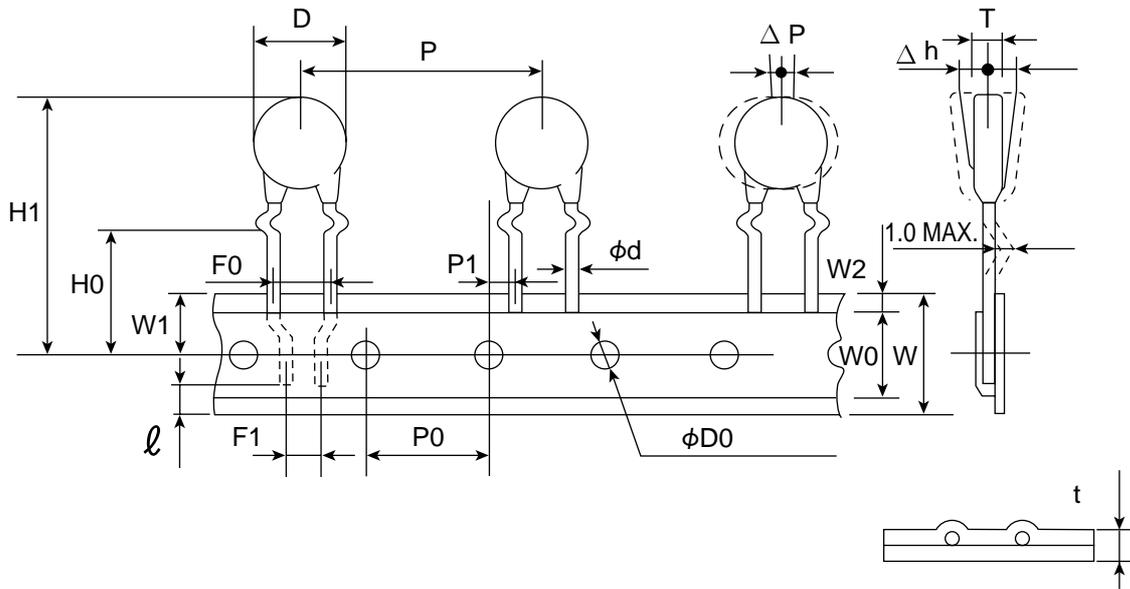

**● 5V, 7V, 9V, 9H : TYPE T15, T35 (Crimped Lead)**

**● 5V, 7V, 9V, 9H (TYPE : T15, T35)**

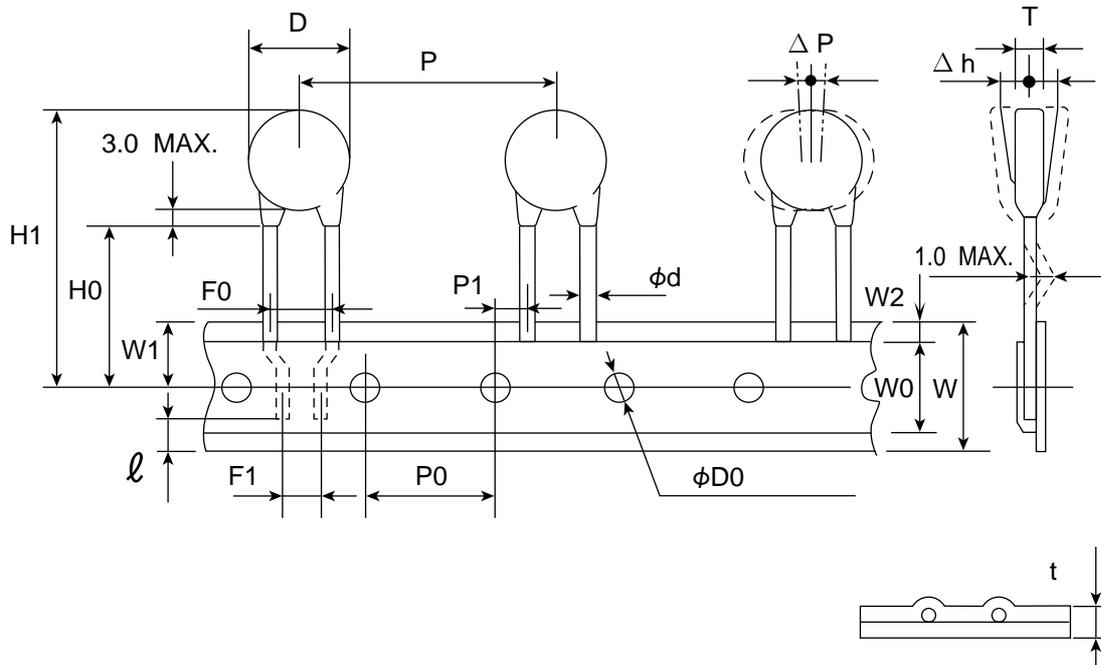

Parameter	Code	Dimensions (mm)	Note
Diameter of component	D	-----	Refer to the applicable detail spec

**● Packaging Quantity**

Size, Series (Taping Code)	150K ~ 271K	331K ~ 511K
5V,7V,9V,9H (T15,T25,T35,T45)	1,500	1,000
10V,14V,10SE,14SE (T1,T2)	800	500
12H,15H (T1,T2)	500 (220K ~ 470K)	
10V,14V (T7,T8)	1000	

**● Others**

- 1) On the box or the reel, followings are noted.
  1. Model number
  2. Lot number
  3. Quantity
  4. Manufacturer country
- 2) Minimum order quantity shall be the packaging quantity per one box one reel.

● **Ordering Information**

Metal Oxide Varistors "TNR G Series" are decided to be "Retentive Products" and be replaced by our new products of V Series.

In case of your new design and/or application, please order by replacement recommendation listed in the following table.

Retentive Products			Replacement Recommendation			
"TNR" G Series Part No.	Maximum Peak Current 8/20µs (A)		"TNR" V Series Part No.	Maximum Peak Current 8/20µs (A)

Unit : mm

## ● Precautions for pattern design and soldering

Do not line under the chip varistors at pattern design.  
TNR C Series is designed for reflow soldering only.  
Peak temperature of reflow soldering profile shall be 220~240°C during 5~10 sec.

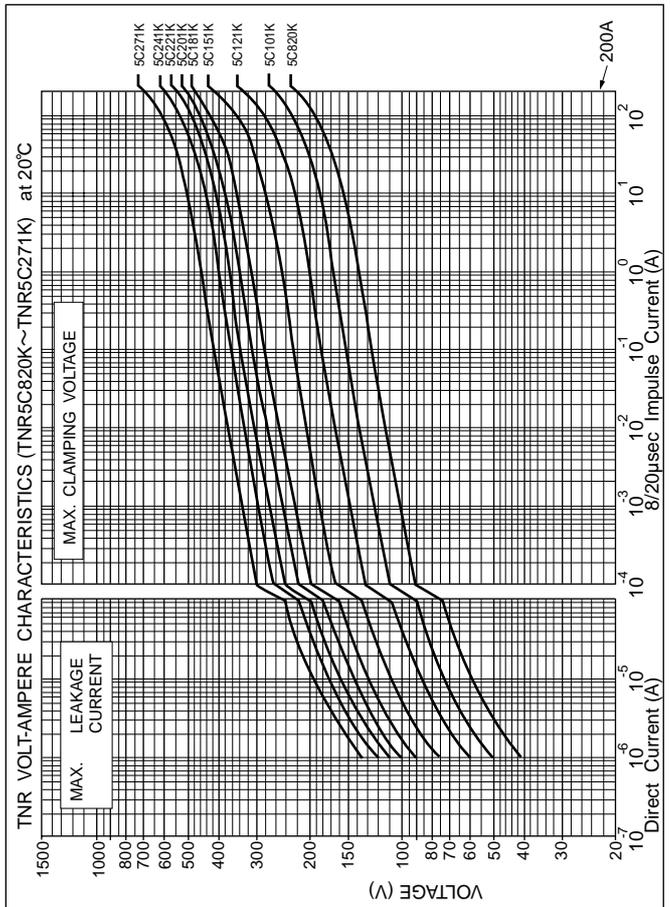

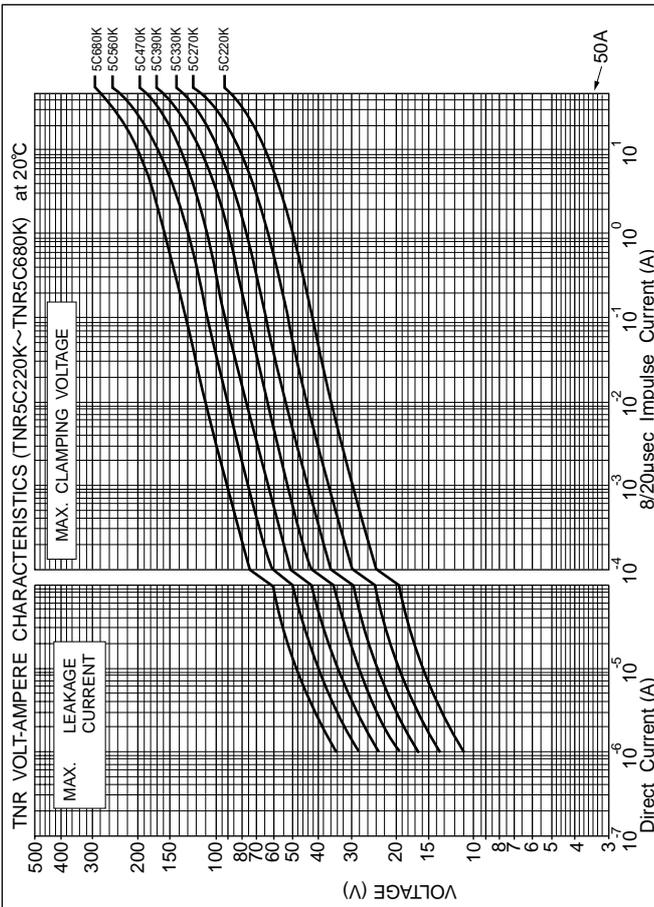

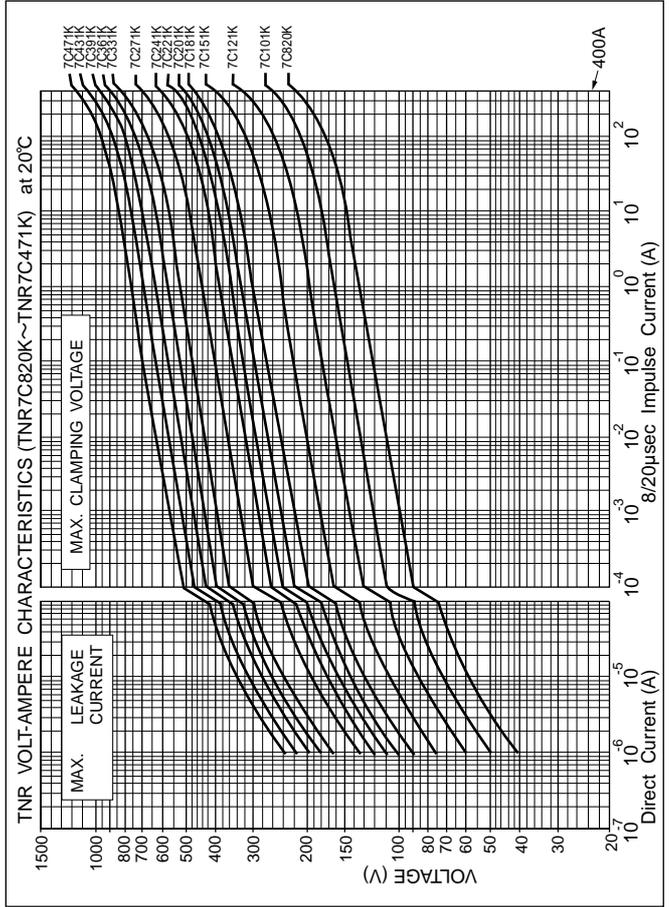

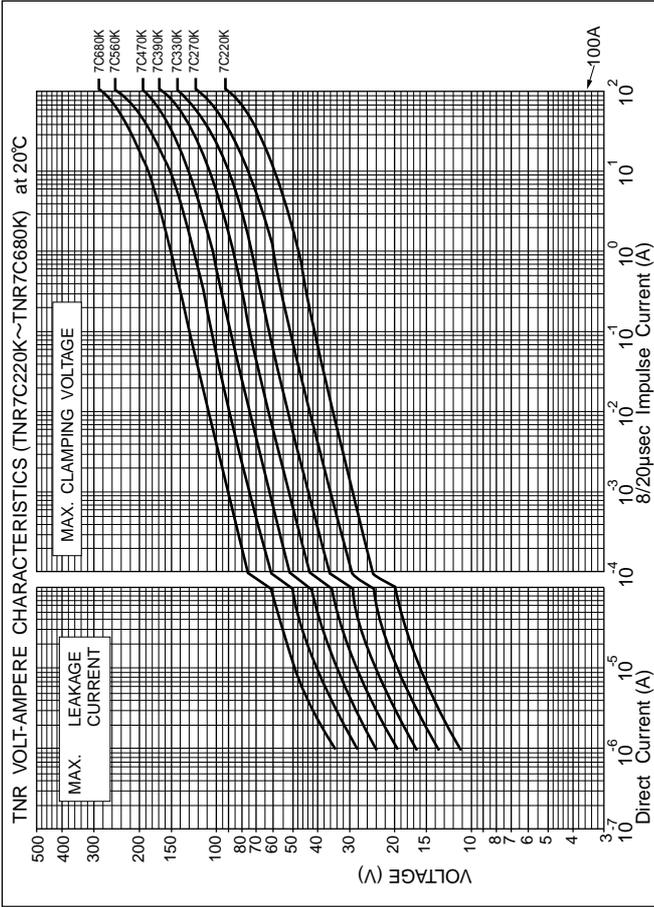

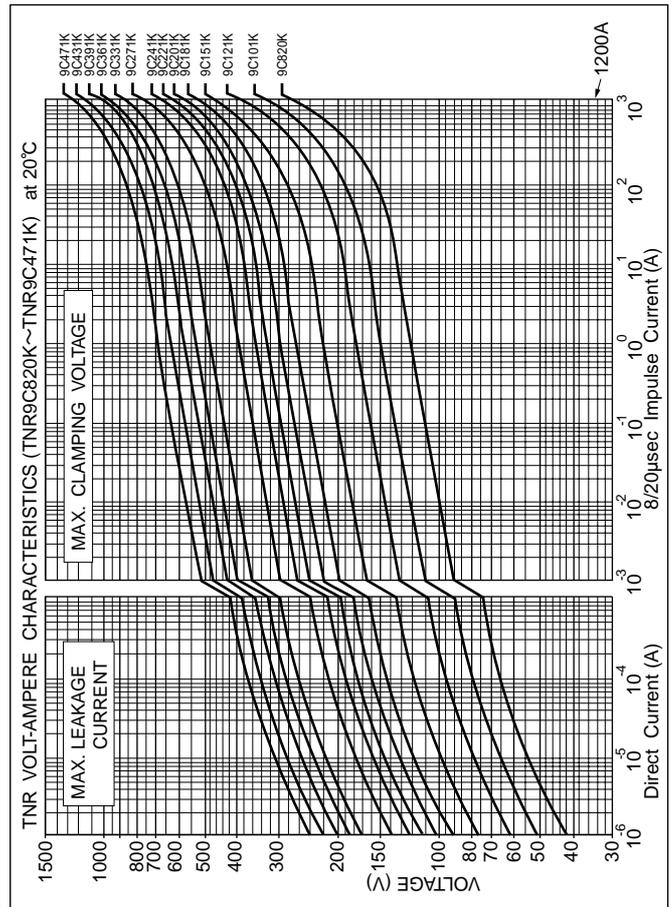

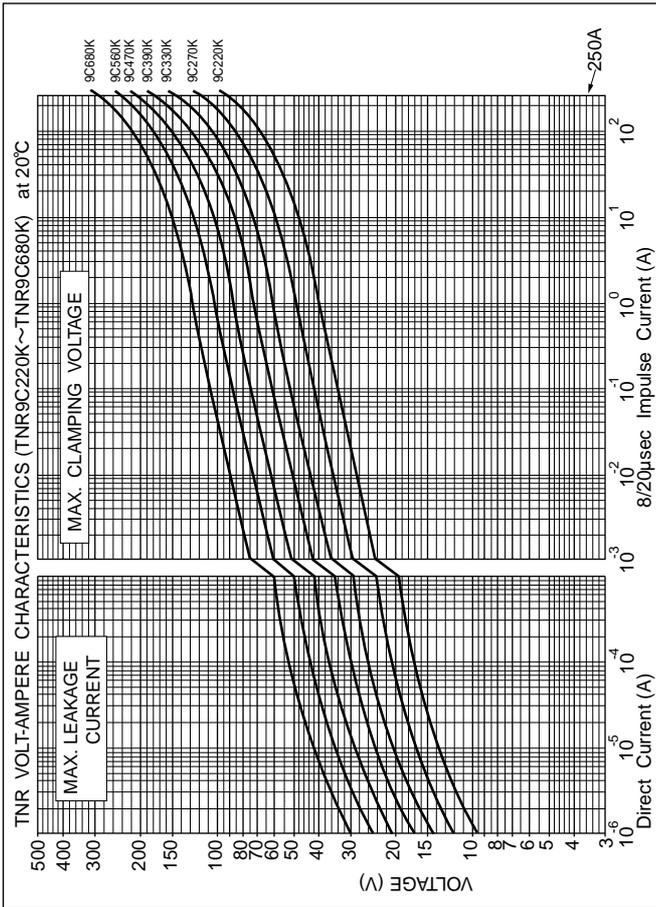

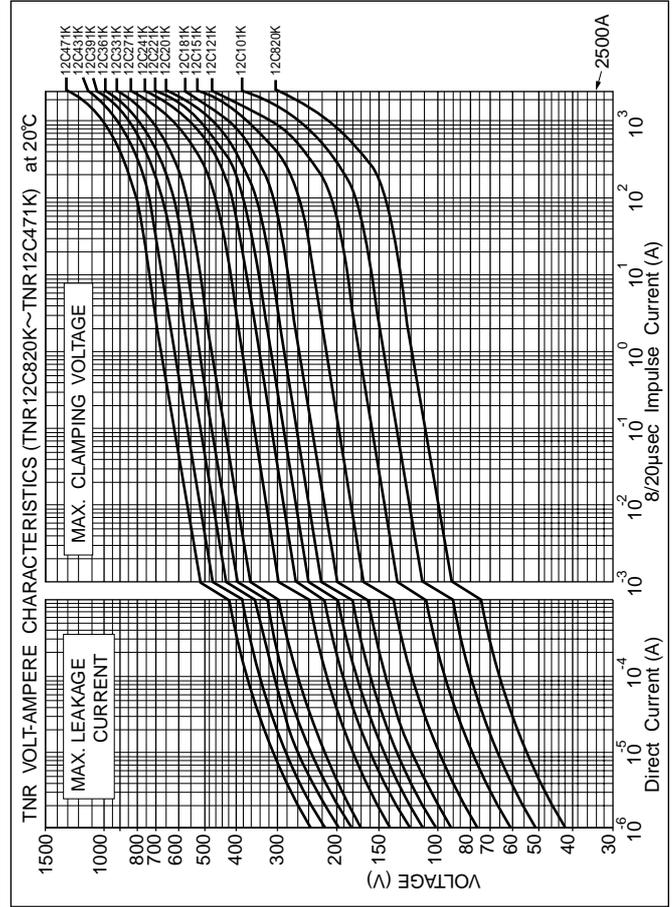

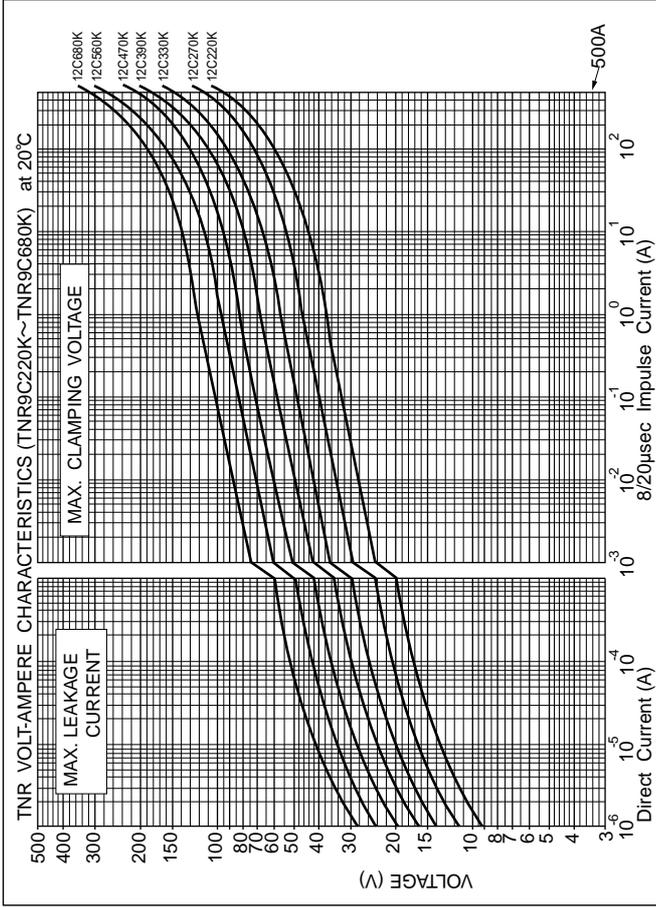

# TNR® C SERIES

## ● Features

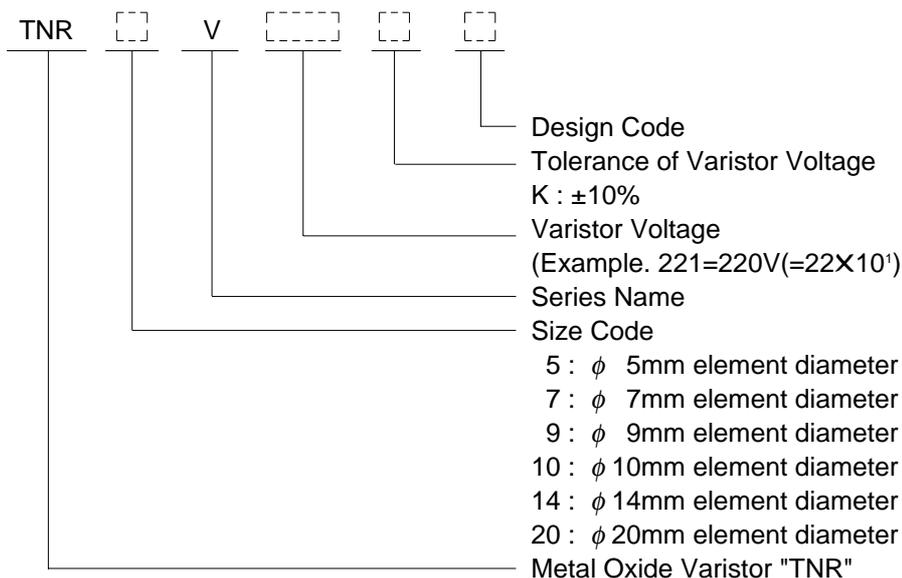

- ◆ Large surge capability (the surge current ratings of TNR V series, by 8/20  $\mu$  Sec., are about two times larger than TNR G series).
- ◆ Large energy capability (1.5 time larger than TNR G series).
- ◆ One rank smaller TNR V has same peak current as TNR G.
- ◆ Excellent voltage non-linear coefficient.  
Low clamping voltage.
- ◆ Symmetrical V-I characteristics (No polarity).
- ◆ Fast response.
- ◆ Stable characteristics against repeated surges.
- ◆ Superior temperature characteristics.
- ◆ High reliability
- ◆ UL recognized
  - UL 1449 : File E95427
  - UL 1414 : File E65426
- ◆ CSA recognized  
CSA CLASS 2221 01 : File LR 97864-2
- ◆ VDE recognized
  - CECC42000
  - CECC42200
  - CECC42201
  - 118623 ÜG

## ● Applications

- ◆ Protection for semiconductors from over voltage.
  - ◆ Protection for electronic instruments from lightning surges.
  - ◆ Absorption of on-off surges from motors and relays.
- Operating temperature range : - 40 ~ +85°C  
Storage temperature range : - 50 ~ +125°C

● **General Specifications for TNR V Series**

Operating temperature range : -40 ± ~ 85°C Storage temperature range : -50 ~ +125°C

Item	Test conditions	Specifications						
Standard Test Condition	20 ± 5°C, 65 ± 20% RH unless specified. However, if it does not affect test result, the condition can be 20 ± 15°C, 65 ± 20% RH also.	—————						
Varistor Voltage	Voltage across varistor at specified current.	Satisfy the specification						
	<table border="1"> <thead> <tr> <th>Type</th> <th>Current C(mA)</th> </tr> </thead> <tbody> <tr> <td>5V</td> <td>0.1</td> </tr> <tr> <td>7V,9V,10V,14V,20V</td> <td>1.0</td> </tr> </tbody> </table>		Type	Current C(mA)	5V	0.1	7V,9V,10V,14V,20V	1.0
	Type		Current C(mA)					
5V	0.1							
7V,9V,10V,14V,20V	1.0							
Maximum Allowable Voltage	Maximum continuous AC voltage (50 ~ 60Hz AC) and maximum DC voltage which can be applied.	Satisfy the specification						
Maximum Peak Surge Current	Maximum surge current (8/20μSec. pulse wave to be applied once, or twice, 2 minute apart) for varistor voltage change within ±10% of the initial value.	Satisfy the specification						
Energy Rating	Maximum energy (2mSec. square wave to be applied once) for varistor voltage change within ±10% of the initial value.	Satisfy the specification						
Rated Wattage	Maximum power (50 ~ 60Hz AC power to be applied for 1,000 hours at 85 ± 2°C) for varistor voltage change within ± 10% of the initial value.	Satisfy the specification						
Maximum Clamping Voltage	Maximum voltage across varistor when 8/20μSec. rated current surge is applied.	Satisfy the specification						
Capacitance	Varistor's capacitance at 1kHz, standard test condition.	For reference only.						
Voltage Temperature Coefficient	$\frac{V_{cmA} \text{ at } 85^{\circ}\text{C} - V_{cmA} \text{ at } 25^{\circ}\text{C}}{V_{cmA} \text{ at } 25^{\circ}\text{C}} \times \frac{1}{60} \times 100 (\% / ^{\circ}\text{C})$ <p style="text-align: center;">VcmA : Actual varistor voltage</p>	Within ± 0.05%/°C						
Insulation	Short circuit the two leads of varistor, and put the varistor body into lead balls (1.6mm diameter) leaving 2mm epoxy coating outside. Then, apply 2.5kVrms between the leads and the lead balls for 60±5 seconds.	The varistor shall withstand with no abnormality.						

● **Reliability Characteristics**

Item	Test conditions	Specifications
Heat Cycle	Subject varistor to the following temperature cycles. -40°C for 30 minutes → Normal room temperature for 10 minutes → 85°C for 30 minutes → Normal room temperature for 10 minutes. This completes one cycle. The cycle shall be repeated 5 times total. After the cycles, the varistor shall be stored at normal room temperature for one hour. Then check the varistor voltage and the appearance.	ΔVcmA ≤ ± 5% No appearance abnormality.
High Temperature Exposure	Store varistor at 125°C for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	ΔVcmA ≤ ± 5% However, on varistors have nominal varistor voltages from 15V to 68V, the varistor voltage change shall be ΔVcmA ≤ ± 10%
Humidity Resistivity	Store at 40°C, 90-95% RH for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	ΔVcmA ≤ ± 5%
High Temperature Operation	Apply maximum applied voltage to varistor at 85°C for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	ΔVcmA ≤ ± 10%

**● Mechanical Characteristics**

Item	Test conditions	Specifications									
Soldering Heat Resistivity	Store varistor at normal room temperature. Dip the varistor leads to solder, at 350 ±10°C for 3 ± 1 seconds, up to 2.0 ~2.5 mm from the varistor body. After that, store the varistor at normal room temperature for 30 minutes, and measure the varistor voltage.	$\Delta V_{cmA} \leq \pm 5\%$ Vc : Actual varistor voltage No mechanical damages									
Solderability	Dip varistor leads to methanol solution (JIS K 1501, about 25%) of rosin (JIS Z 5902) for 5~10 seconds. Then, dip the lead to solder (JIS Z 3282 H60A or H63A) at 225 ~ 240°C, up to 2.0 ~ 2.5mm from the varistor body for 5 ± 0.5 seconds. Then, check the solderability.	At least, 95% of the surface dipped to solder shall be covered by new solder.									
Lead Pull Strength	Fix varistor body, and suspend specified weight toward direction of lead axis. <table border="1" data-bbox="587 703 1102 808"> <thead> <tr> <th>Type</th> <th>Lead Diameter</th> <th>Weight</th> </tr> </thead> <tbody> <tr> <td>5V, 7V, 9V</td> <td>0.6mm</td> <td>10N</td> </tr> <tr> <td>10V, 14V, 20V</td> <td>0.8mm</td> <td>10N</td> </tr> </tbody> </table>	Type	Lead Diameter	Weight	5V, 7V, 9V	0.6mm	10N	10V, 14V, 20V	0.8mm	10N	No abnormality such as disconnection.  $\Delta V_{cmA} \leq \pm 5\%$
Type	Lead Diameter	Weight									
5V, 7V, 9V	0.6mm	10N									
10V, 14V, 20V	0.8mm	10N									
Lead Bend Strength	Fix varistor body vertically. Then suspend specified weight and bent the varistor body by 90°, and return it to the original position. Carry out the operation in the opposite direction and return the body to the original position. <table border="1" data-bbox="587 954 1102 1059"> <thead> <tr> <th>Type</th> <th>Lead Diameter</th> <th>Weight</th> </tr> </thead> <tbody> <tr> <td>5V, 7V, 9V</td> <td>0.6mm</td> <td>5N</td> </tr> <tr> <td>10V, 14V, 20V</td> <td>0.8mm</td> <td>5N</td> </tr> </tbody> </table>	Type	Lead Diameter	Weight	5V, 7V, 9V	0.6mm	5N	10V, 14V, 20V	0.8mm	5N	The leads shall not disconnect, slacken and peel off.
Type	Lead Diameter	Weight									
5V, 7V, 9V	0.6mm	5N									
10V, 14V, 20V	0.8mm	5N									
Vibration Resistivity	Mount varistor body on vibrator, and conduct following vibration test. Peak-to-Peak amplitude : 1.5mm Vibration frequency range : 10Hz ~ 55Hz Sweeping time: Approximately one minute for 10Hz → 55Hz → 10Hz Direction and duration of vibration : Three directions of X, Y and Z. Two hours each. Six hours total.	No remarkable appearance abnormality.  $\Delta V_{cmA} \pm 5\%$

● **General Specifications of TNR H Series**

Operating temperature range : - 40°C to +125°C Storage temperature range : - 50°C to +150°C

Item	Test Conditions	Specifications
Standard Test Condition	Ambient temperature : 20 ± 5°C Relative humidity : 65 ± 20% RH  if there is any doubt about the results, measurement shall be made within the following limits.  Ambient temperature : 20 ± 5°C Relative humidity : 65 ± 20% RH	_____
Varistor Voltage	The voltage between the two terminals measured at 1mA DC is called Varistor Voltage. The measurement shall be made as fast as possible to avoid heat effecton.	Satisfy the specification.
Maximum Allowable Voltage	Maximum continuous sinusoidal RMS voltage or Maximum continuous DC voltage which may be applied.	Refer to RATINGS.
Maximum applicable voltage for a short period (5 minutes)	Maximum DC voltage to be applied for only 5 minutes.	Refer to RATINGS.
Maximum Clamping Voltage	The maximum voltage between the terminals, measured standard impluse current (8/20 μs).	Satisfy the specification.
Maximum Energy	Maximum energy within the ±10% varistor voltage change when 1 impulse 20 msec long is applied.	Satisfy the specification.
Temperature Coefficient	$\frac{V_{1mA \text{ at } 85^{\circ}C} - V_{1mA \text{ at } 25^{\circ}C}}{V_{1mA \text{ at } 25^{\circ}C}} \times \frac{1}{60} \times 100 (\%/^{\circ}C)$	Within ±0.05%/°C

● **Mechanical characteristics**

Item	Test Conditions	Specifications
Terminal Pull Strength	After gradually applying the force keeping the unit fixed for 10 ± 1 second in axial direction, the damage of the terminals shall be visually examined.  $\frac{\text{Lead diameter}}{\phi 0.6\text{mm. } \phi 0.8\text{mm}} \quad \frac{\text{Force}}{10 \text{ N (1.0 kgf)}}$	No remarkable damage
Terminal Bending Strength	The unit shall be secured with its terminal kept vertical and the weight specified below be applied in the axial direction. The terminal shall gradually be bend by 90° in one direction then 90° in the opposite direction, and again back to original position. The damage of the terminal shall be visually examined.  $\frac{\text{Lead diameter}}{\phi 0.6\text{mm. } \phi 0.8\text{mm}} \quad \frac{\text{Force}}{5 \text{ N (0.5 kgf)}}$	No remarkable damage
Vibration	After repeatedly applying a single harmonic vibration (amplitude : 0.75mm) double amplitude : 1.5mm with 1 minute vibration frequency cycle (10Hz→500Hz→10Hz) to each three perpendicular directions for 2 hours. Total 6 hours. The devices shall be visually examined.	No remarkable damage
Solderability	Dipping the terminal to a Rosin depth for 5 ~ 10 seconds. After dipping the terminal to a depth of 2.0 ~ 2.5mm from the body in a soldering bath of 230 ± 5°C for 5 ± 0.5 seconds, the terminal shall be visually examined.	75% of the terminals should be covered with solder uniformly.
Resistance to Soldering Heat	The terminal shall be dipped into a soldering bath of 350 ± 10°C to a depth of 2.0 ~ 2.5mm from the body and be held there for 5 ± $\frac{1}{0}$ seconds. or The terminal shall be dipped into a soldering bath of 260 ± 5°C to a depth of 2.0 ~ 2.5mm from the body and be held there for 10 ± 1 seconds.	ΔV1mA ≤ ±5% No outstanding damage

**● Environmental characteristics**

Item	Test Conditions	Specifications
High Temperature Storage (Dry heat)	The specimen shall be subjected 150±2°C for 1000±12 hours without load.	$\Delta V_{1mA} \leq \pm 10\%$
Damp heat (Humidity)	The specimen shall be subjected to 60±2°C, 90 to 95%RH for 1000±12 hours without load.	$\Delta V_{1mA} \leq \pm 10\%$
Temperature Cycle	The temperature cycle shown below shall be repeated 50 cycles. -40°C±3°C, 30 minutes ← → +150°C±2°C, 30 minutes	$\Delta V_{1mA} \leq \pm 10\%$ No remarkable damage
High Temperature Operating	The specimen shall be subjected to 125±2°C with the maximum allowable voltage for 1000 ±12 hours.	$\Delta V_{1mA} \leq \pm 20\%$
Damp heat Operating	The specimen shall be subjected to 60±2°C, 90 to 95%RH With the maximum allowable voltage for 1000 ±12 hours.	$\Delta V_{1mA} \leq \pm 10\%$

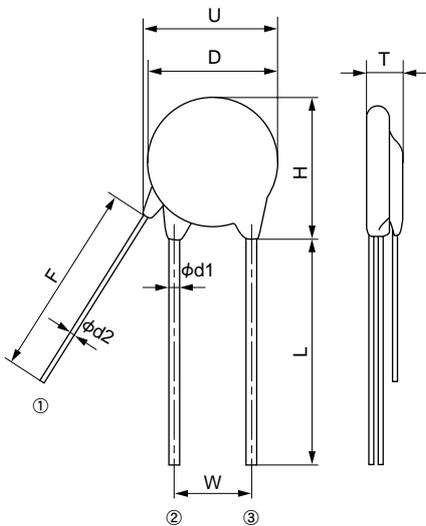

Varistor voltage change of forward direction shall be measured in the test of unipole surge life and DC load life. Varistor voltage change is measured after stored at Standard Test Conditions for 1 to 2 hours.

Note : For 42V battery line, please contact our sales office.

When the surge energy much higher than the rated maximum energy is applied to the varistors, it may blow up and catch fire.

Our newly developed TNR SE series is to prevent from being caught fire even very high surge energy is applied.

Thus electric appliance using our TNR SE series can be much safer.

### ● Features

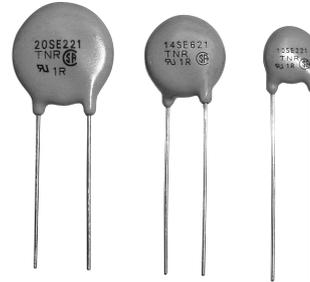

- ◆ Newly developed non-flammable material (Halogen Free) is used for outer coating.
- ◆ The new outer coating will meet UL flammability test.
- ◆ At the over voltage test, the new material shall deter burning caused by the high temperature, arc and the large surge current when TNR shall blow up.
- ◆ General specifications are same as that of V series, large surge capability TNR.

### ● Applications

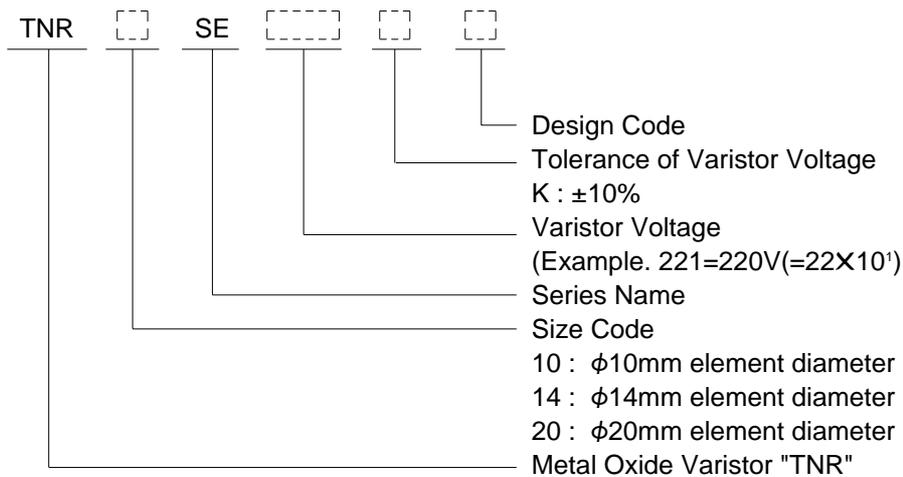

- ◆ Protection for semiconductors from over voltage.
- ◆ Protection for electronic instruments from lightning surge.
- ◆ Absorption of on-off surge from motors and relays..

Operating temperature range : - 40 ~ +85°C

Storage temperature range : - 50 ~ +125°C

**● General Specifications for TNR SE Series**

 Operating temperature range :  $-40 \pm \sim 85^{\circ}\text{C}$  Storage temperature range :  $-50 \sim +125^{\circ}\text{C}$ 

Item	Test conditions	Specifications
Standard Test Condition	$20 \pm 5^{\circ}\text{C}$ , $65 \pm 20\%$ RH unless specified. However, if it does not affect test result, the condition can be $20 \pm 15^{\circ}\text{C}$ , $65 \pm 20\%$ RH also.	—————
Varistor Voltage	The voltage between the two terminals measured at 1mA DC is called Varistor Voltage. The measurement shall be made as fast as possible to avoid heat effect.	Satisfy the specification
Maximum Allowable Voltage	Maximum continuous AC voltage (50 ~ 60Hz AC) and maximum DC voltage which can be applied.	Satisfy the specification
Maximum Peak Surge Current	Maximum surge current (8/20 $\mu$ Sec. pulse wave to be applied once, or twice, 2 minute apart) for varistor voltage change within $\pm 10\%$ of the initial value.	Satisfy the specification
Energy Rating	Maximum energy (2mSec. square wave to be applied once) for varistor voltage change within $\pm 10\%$ of the initial value.	Satisfy the specification
Rated Wattage	Maximum power (50 ~ 60Hz AC power to be applied for 1,000 hours at $85 \pm 2^{\circ}\text{C}$ ) for varistor voltage change within $\pm 10\%$ of the initial value.	Satisfy the specification
Maximum Clamping Voltage	Maximum voltage across varistor when 8/20 $\mu$ Sec. rated current surge is applied.	Satisfy the specification
Capacitance	Varistor's capacitance at 1kHz, standard test condition.	For reference only.
Voltage Temperature Coefficient	$\frac{V_{1\text{mA at } 85^{\circ}\text{C}} - V_{1\text{mA at } 25^{\circ}\text{C}}}{V_{1\text{mA at } 25^{\circ}\text{C}}} \times \frac{1}{60} \times 100 (\%/^{\circ}\text{C})$ V1mA : Actual Varistor Voltage	Within $\pm 0.05\%/^{\circ}\text{C}$
Insulation	Short circuit the two leads of varistor, and put the varistor body into lead balls (1.6mm diameter) leaving 2mm epoxy coating outside. Then, apply 2.5kVrms between the leads and the lead balls for $60 \pm 5$ seconds.	The varistor shall withstand with no abnormality.

**● Reliability Characteristics**

Item	Test conditions	Specifications
Heat Cycle	Subject varistor to the following temperature cycles. $-40^{\circ}\text{C}$ for 30 minutes $\rightarrow$ Normal room temperature for 10 minutes $\rightarrow$ $85^{\circ}\text{C}$ for 30 minutes $\rightarrow$ Normal room temperature for 10 minutes. This completes one cycle. The cycle shall be repeated 50 times total. After the cycles, the varistor shall be stored at normal room temperature for one hour. Then check the varistor voltage and the appearance.	$\Delta V_{1\text{mA}} \leq \pm 5\%$ No appearance abnormality.
High Temperature Exposure	Store varistor at $125^{\circ}\text{C}$ for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	$\Delta V_{1\text{mA}} \leq \pm 5\%$
Humidity Resistivity	Store at $40^{\circ}\text{C}$ , 90~95% RH for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	$\Delta V_{1\text{mA}} \leq \pm 5\%$
High Temperature Operation	Apply maximum applied voltage to varistor at $85^{\circ}\text{C}$ for 1,000 hours. After that, store the varistor at normal room temperature for one hour. Then check the varistor voltage.	$\Delta V_{1\text{mA}} \leq \pm 10\%$

**● Mechanical Characteristics**

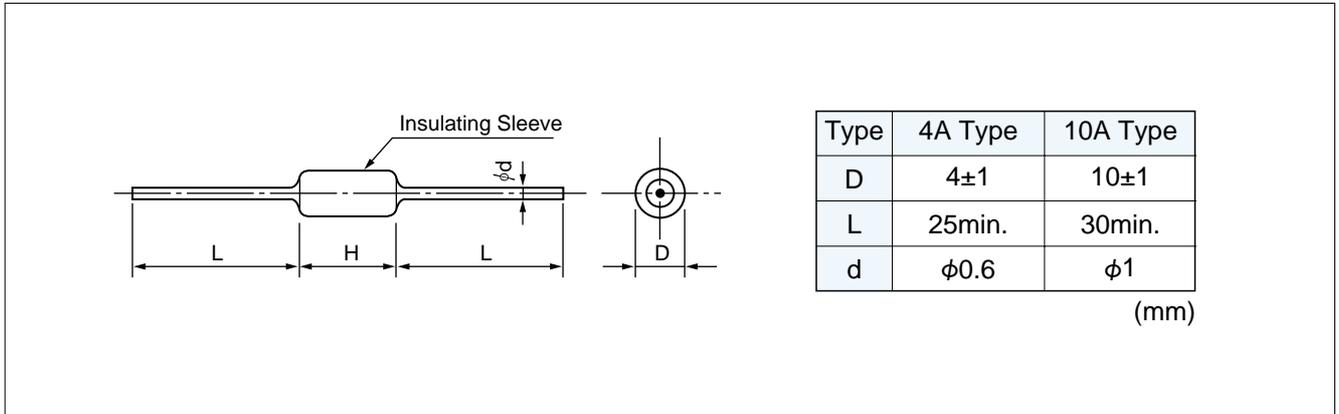

Item	Test conditions	Specifications				
Soldering Heat Resistivity	Store varistor at normal room temperature. Dip the varistor leads to solder, at $350 \pm 10^{\circ}\text{C}$ for $3 \pm \frac{1}{2}$ seconds, up to 2.0 ~2.5 mm from the varistor body. After that, store the varistor at normal room temperature for 30 minutes, and measure the varistor voltage.	$\Delta V_{1\text{mA}} \leq \pm 5\%$ Vc : Actual varistor voltage No mechanical damages				
Solderability	Dip varistor leads to methanol solution (JIS K 1501, about 25%) of rosin (JIS Z 5902) for 5~10 seconds. Then, dip the lead to solder (JIS Z 3282 H60A or H63A) at $225 \sim 240^{\circ}\text{C}$ , up to 2.0 ~ 2.5mm from the varistor body for $5 \pm 0.5$ seconds. Then, check the solderability.	At least, 95% of the surface dipped to solder shall be covered by new solder.				
Lead Pull Strength	Fix varistor body, and suspend specified weight toward direction of lead axis.  <table style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <tr> <td style="text-align: center; border-bottom: 1px solid black;">Lead diameter</td> <td style="text-align: center; border-bottom: 1px solid black;">Force</td> </tr> <tr> <td style="text-align: center;"><math>\phi 0.6\text{mm}, \phi 0.8\text{mm}</math></td> <td style="text-align: center;">10N</td> </tr> </table>	Lead diameter	Force	$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	10N	No abnormality such as disconnection.  $\Delta V_{1\text{mA}} \leq \pm 5\%$
Lead diameter	Force					
$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	10N					
Lead Bend Strength	The varistor shall be secured with its terminal kept vertical and the force specified below shall be applied in the axial direction. The terminal shall gradually be bend by 90 in one direction then back to original position. The damage of the terminal shall be visually examined.  <table style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <tr> <td style="text-align: center; border-bottom: 1px solid black;">Lead diameter</td> <td style="text-align: center; border-bottom: 1px solid black;">Force</td> </tr> <tr> <td style="text-align: center;"><math>\phi 0.6\text{mm}, \phi 0.8\text{mm}</math></td> <td style="text-align: center;">2.5N</td> </tr> </table>	Lead diameter	Force	$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	2.5N	No remarkable damage as remarkable the inner ceramic element or terminal open.
Lead diameter	Force					
$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	2.5N					
Vibration Resistivity	Mount varistor body on vibrator, and conduct following vibration test. Peak-to-Peak amplitude : 1.5mm Vibration frequency range : 10Hz ~ 55Hz Sweeping time: Approximately one minute for 10Hz → 55Hz → 10Hz Direction and duration of vibration : Three directions of X, Y and Z. Two hours each. Six hours total.	No remarkable appearance abnormality.  $\Delta V_{1\text{mA}} \pm 5\%$				
Flammability test	The varistor shall be subjected to 60 second applications of test flame.  Burner : Bunsen gas burner 9000kcal / m <sup>3</sup> Diameter of flame nozzle : $\phi 9.5$ mm Position : The specimen shall be fixed horizontal. Point of application shall be approximately center of the specimen.	No catching fire, and no flaming drops.

Operating Temperature Range -40 ~ +85°C Storage Temperature Range -40 ~ +110°C

## ● Features

- ◆ Excellent clamping voltage characteristic and fast response time (<50nsec.) when subjected to impulse surges.
- ◆ No follow current.
- ◆ Any voltage rating within a VImA range from 200V to 1,100V available. (V1mA : varistor voltage.)
- ◆ Bilateral and symmetrical V- I characteristics curve. The TNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients.
- ◆ Large withstanding peak current 8,000A-25,000A(8/20μSec.).

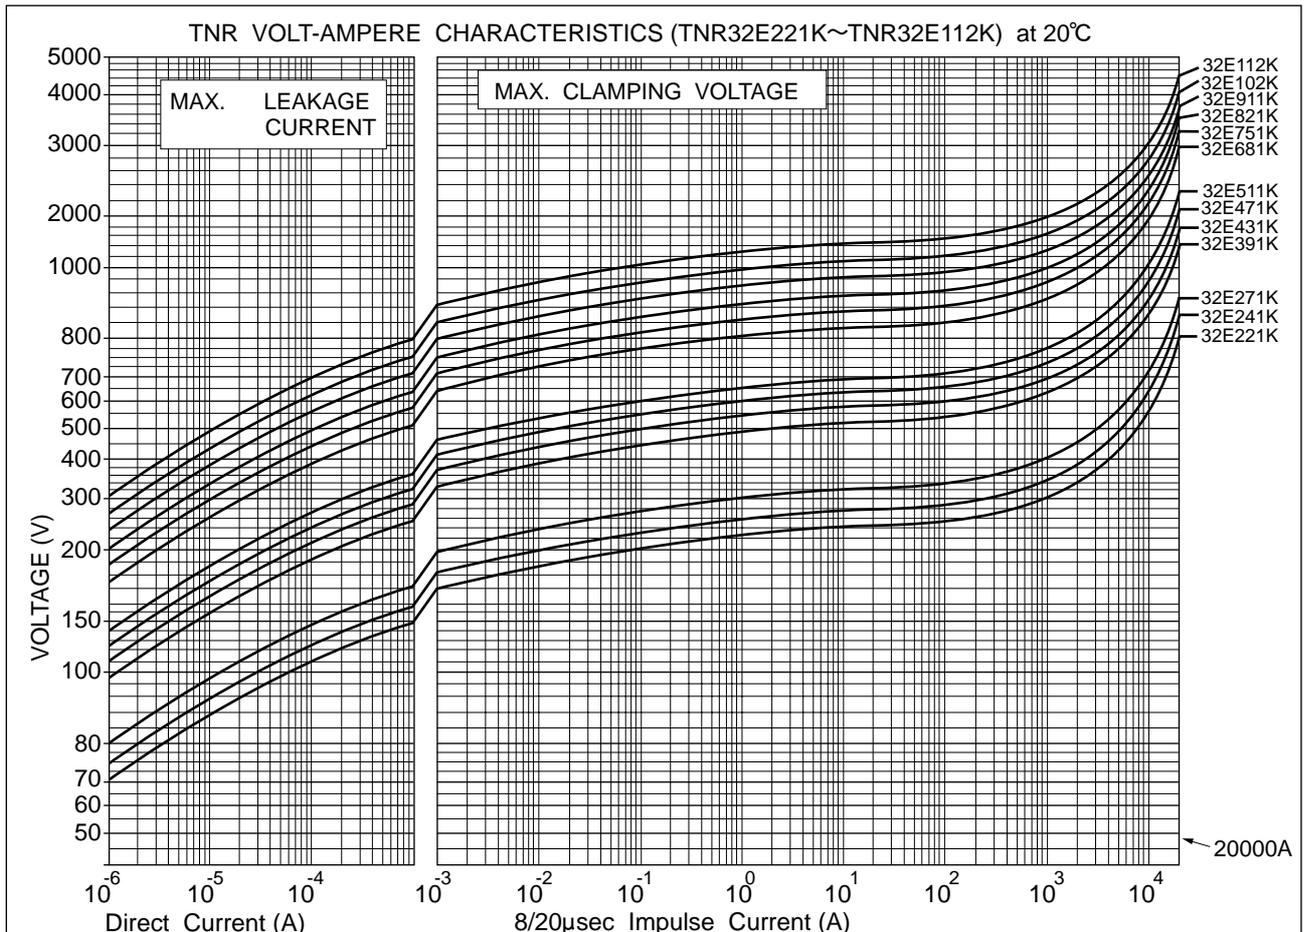

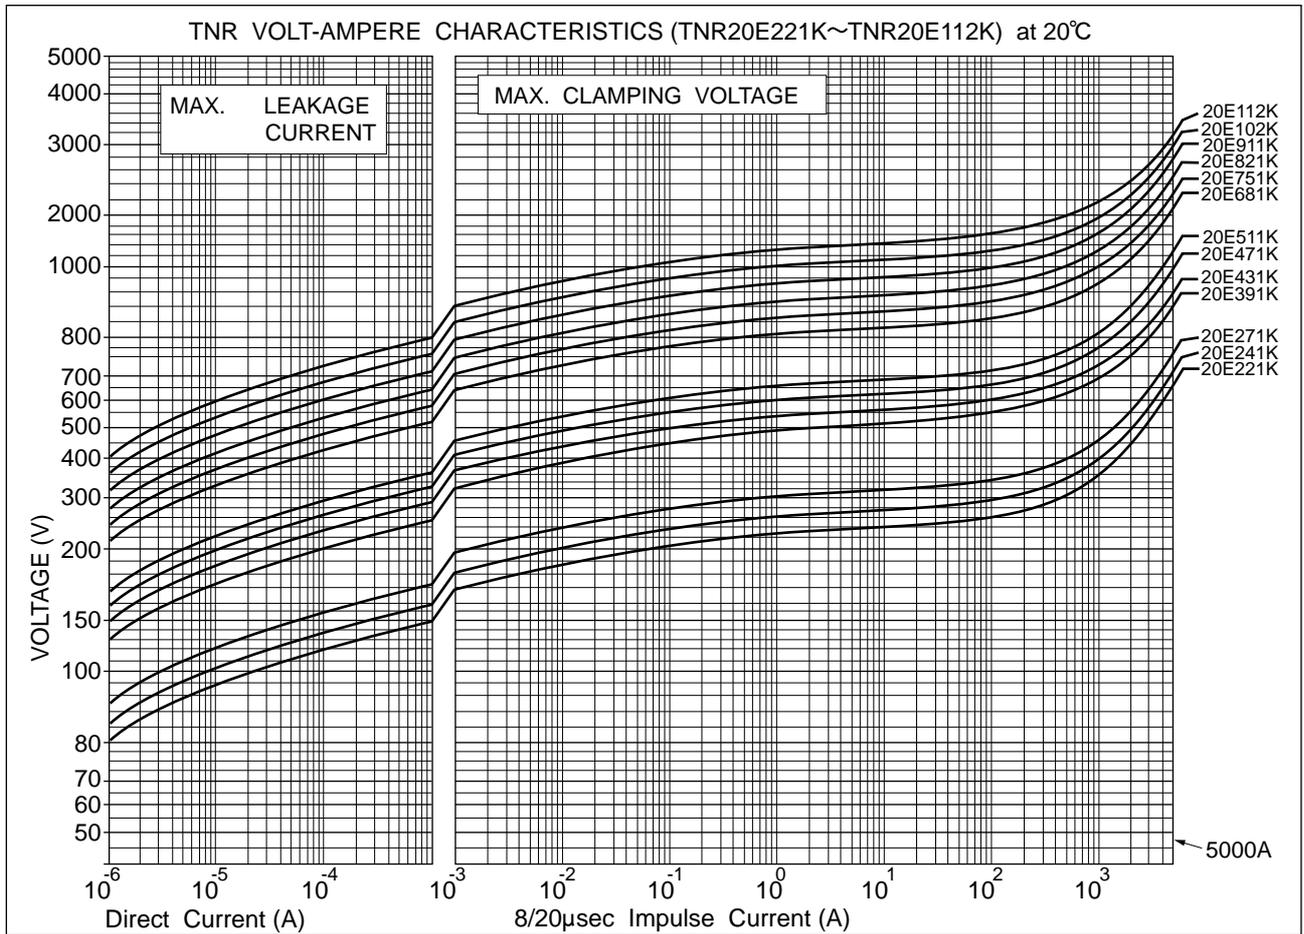

## ● Applications

- ◆ Protection of semiconductors such as transistors, diodes, ICs, thyristors, triacs, etc.
- ◆ Protection of various equipment including :
  - \*Broadcasting, communications equipment.
  - \*Traffic and railway signal systems.
  - \*Automatic control devices for power distribution.
  - \*Waterworks.
  - \*Home entertainment equipment.
- ◆ Surge absorption of relays and electromagnetic valves.
- ◆ Absorption of surges generated within equipment such as TVs.

## NOTICE OF DISCONTINUANCE

Unfortunately, due to extremely low order intake, we have decided to sell off our Multilayer Varistor Chip technology along with the production lines.

This in no way means we are getting out of the MOV business as we will continue to develop, design and manufacture radial leaded Metal Oxide Varistors.

The market for SMD multilayer varistors never truly developed due to their high cost versus comparable radial lead MOV components. In most cases, a 5 : 1 cost disadvantage is present for MLV chips versus radial leaded duplicates.

The following company is the new owner of our equipment and technology. We have included their web page information below.

MARUWA CO. LTD

<http://www.maruwa.co.jp/e/>
